

Radar Butterknife Slalom Ski

\$1,055

One of the most difficult parts about learning to efficiently turn a ski is understanding how to roll the ski's edge into higher angle. The higher the edge angle, the easier and quicker the ski will turn.

With Butterknife, the sidecut and surface area were formed for stability and an easier roll into a higher edge. Turns are automatic and buoyancy is at a maximum with the largest surface area in its class. Effortless ups, light line tension and low spray. The easiest ski you've ever ridden. Now with All Terrain Core and a 100% carbon build!

KEY FEATURES:

- All-Terrain Core
- 100% Carbon Laminates
- Recommended max speed 30mph
- RST (Radiused Stability Turn) Tail Shape
- Bent Vee fin
